

Microtopping

Product Information

Microtoppings are a very fine smooth cementitious coating which is extremely popular with architects and designers as they can be applied on their own, tinted to create the look of precast concrete, or can be used as a base to create a clean blank canvas for other finishes like acid stains, dyes and other custom looks.

The finished microtopping surface is always sealed once completed to protect the surface and lock in the colour.

Clients love the fact that that they can fully customise the look to suit their design. You can have numerous colours set in patterns or because it is so thin, you can layer the colours to get amazing effects.

A very versatile product, that can be applied to either floors or walls.

- Beautiful natural look
- Fully customisable
- Can be used as blank canvas for other finishes like acid stains and concrete dyes
- Great in residential and commercial settings
- Cost effective flooring option
- Sealed once installed
- Large range of colours
