

# Exposed Aggregate

## Product Information

Exposed Aggregate is concrete, which has the surface of the finished concrete “exposed” to reveal the aggregates in the concrete. It is very popular throughout New Zealand because its hardwearing surface and natural look. It is especially suited to driveways and higher traffic areas.

There are a variety of aggregates which can be either added to the concrete itself or seeded into the surface. You can also introduce coloured oxides into the concrete itself at the batching plant to suit different colour schemes.

Exposed Aggregate can be left unsealed or sealed depending on ones desired look and the amount of traffic it is likley to receive. When sealed, it is recommended that sealing be repeated every 3 - 4 years.

- Very hard wearing surface
- Beautiful natural appeal
- Coloured aggregates and oxides can be added to enhance the overall appearance
- Perfect for driveways
- Very low maintenance
- Great traction underfoot
- Blends in with both classic and contemporary looking designs
