

Vertical Overlay

Product Information

A Vertical Overlay is a decorative wall covering constructed from lightweight cement-based materials to mimic stone, brick and many other wall textures.

Decorative stamping can add beauty and drama to concrete floors, sidewalks, driveways and other horizontal surfaces. Now similar stamping and texturing techniques are used to enhance vertical surfaces, such as the walls inside your home or business, a fireplace front, an exterior facade or retaining wall and on and on. They can be applied directly over virtually any properly prepared wall surface, including concrete and masonry, wood, cement board, plaster, even gib. Our special mixes are formulated to go on thickly without sagging, allowing us to recreate extremely realistic looks.

Hand-carved vertical overlays are one of the hottest newest trends in decorative concrete.

- A huge range of options
- Lightweight, cast as one piece and tied back into the wall
- Much safer than real stone
- Very cost effective compared to the real thing
- For interior and exterior
- Gives a real WOW factor to any project
- Fully customisable and can be moulded to suit any setting
